

REGIONAL NETWORK UPDATE COVID-19

REGIONAL NETWORK UPDATE: GREATER ASIA

May 6, 2020,

North Asia

- **Japan:** The current state of emergency (last updated [here](#)) has been extended to May 31. There is no impact to current operations.

Southeast Asia

There are no updates from Southeast Asia today.

South Asia

- **Bangladesh:** Chittagong Port is experiencing congestion largely resulting from a backup of inbound containers that are not being picked up. Currently the port is able to handle export volumes and we are managing customer outbound flows without delay. We will periodically update "port terminal" row in the Operational Status Matrix ([link below](#)) and work directly with any impacted customers.

Please refer to the [COVID-19 Operational Status Matrix here](#) for most recent detailed regional updates.

Global cases can be tracked [by accessing this live map created by Johns Hopkins University](#).
